Contents

1 Preface **5**

2 Introduction **7**

3 R Basics **9**

4 Exploratory Data Analysis **11**

5 Linear Models **13**

6 Generalized Linear Models **15**

7 Linear Mixed Moxeld **17**

8 Multivariate Data Analysis **19**

9 Supervised **21**

10 Unsupervised **23**

11 Parallel Computing **25**

12 Memory Efficiency **27**

13 Sparse Representations **29**

14 Convex Optimization **31**

15 RCpp **33**

16 Numerical Linear Algebra **35**

17 Writing Packages **37**

18 Plotting **39**

19 Reports **41**

Chapter 1

Preface

This book accompanies BGU's "R" course, at the department of Industrial Engineering and Management.

It has several purposes:

- Help me organize and document the course material.
- Help students during class so that they may focus on listening and not writing.
- Help students after class, so that they may self-study.

At its current state it is experimental. It can thus be expected to change from time to time, and include mistakes. I will be enormously grateful to whoever decides to share with me any mistakes found.

I am enourmously grateful to Yihui Xie, who's *bookdown* R package made it possibly to easily write a book which has many mathematical formulae, and R output.

I hope the reader will find this text interesting and useful.

Chapter 2

Introduction

Chapter 3

R Basics

Chapter 4

Exploratory Data Analysis

Chapter 5

Linear Models

Chapter 6

Generalized Linear Models

Chapter 7

Linear Mixed Moxeld

Chapter 8

Multivariate Data Analysis

Chapter 9

Supervised

Chapter 10

Unsupervised

Chapter 11

Parallel Computing

Chapter 12

Memory Efficiency

Chapter 13

Sparse Representations

Chapter 14

Convex Optimization

Chapter 15

RCpp

Chapter 16

Numerical Linear Algebra

Chapter 17

Writing Packages

Chapter 18

Plotting

Chapter 19

Reports
